## NEW QUESTION: 1

A departmental manager has developed a highly effective, complex Microsoft 365 Copilot prompt for analyzing weekly sales data. The manager wants all 30 members of their sales team to have easy, consistent access to this specific prompt template. What is the recommended method for the manager to ensure consistent usage of this high-value prompt across the entire team?

- A. Use the Copilot Studio interface to publish the prompt as a new Agent
- B. Send the text of the prompt to the team via email and instruct them to save it in their personal OneDrive
- C. Share the prompt template directly from the Microsoft 365 Copilot Prompt Library
- D. Create a Power Automate flow that executes the prompt on a weekly schedule

Answer: (SHOW ANSWER)

The Copilot Prompt Library (or a similar centralized prompt management feature accessible through Microsoft 365 apps or the web) is specifically designed to allow users to save, organize, and share high-quality, reusable prompt templates with their colleagues or specific groups, ensuring consistent and effective use of Copilot across a team or organization.

## NEW QUESTION: 2

Your organization has a Microsoft 365 subscription.

You need to evaluate your organization's Identity Secure Score.

Which two factors affect the score? Each correct answer presents a complete the solution.

NOTE: Each correct selection is worth one point.

- A. the SharePoint site permissions
- B. the number of global administrators
- C. passwords that are never expired

**D.** the location of the users

**Answer:** ([SHOW ANSWER](#))

[B]

The number of Global Administrators directly affects your Identity Secure Score.

The score is impacted by two primary recommendations regarding these roles:

Designate more than one Global Administrator:

Microsoft requires at least two Global Admins to prevent a total lockout if one account is lost or compromised.

One of these should ideally be a "break-glass" emergency access account.

Limit Global Administrators to fewer than five:

Your score may decrease if you have five or more Global Admins.

Having too many increases the attack surface and "privilege creep".

[C]

Enabling "passwords never expire" (specifically, removing mandatory expiration) positively affects your Microsoft 365 Identity Secure Score. Microsoft considers this a best practice, as forcing regular password changes often leads to users choosing weaker, predictable passwords.

Reference:

<https://learn.microsoft.com/en-us/entra/identity/monitoring-health/concept-identity-secure-score>

### **NEW QUESTION: 3**

Your organization has a Microsoft 365 subscription.

You need to investigate security incidents and alerts raised from the Windows 11 devices in your organization.

What should you use?

**A.** Microsoft Entra ID Protection

**B.** Microsoft Defender for Identity

**C.** Microsoft Purview Insider Risk Management

**D.** Microsoft Defender for Endpoint

**Answer:** ([SHOW ANSWER](#))

Microsoft Defender for Endpoint in Microsoft 365 allows security teams to investigate, analyze, and remediate security incidents on Windows 11 devices via the Microsoft Defender portal ([security.microsoft.com](https://security.microsoft.com)). It provides a unified experience to view device timelines, threat intelligence, and alerts, enabling automatic or manual response to threats like malware and phishing.

Reference:

<https://learn.microsoft.com/en-us/defender-xdr/investigate-incidents>

### **NEW QUESTION: 4**

Your organization has a Microsoft 365 subscription that contains Microsoft SharePoint sites and Microsoft Teams teams.

You discover that the sites and the teams are shared to users outside your organization.

You need to identify which sites and teams were shared to the external users.

What should you use?

**A.** the SharePoint admin center

**B.** the Microsoft Teams admin center

**C.** the Microsoft 365 admin center

**D.** the Microsoft Defender portal

**Answer: (SHOW ANSWER)**

To identify which sites and teams are shared with external users using the SharePoint admin center, you should use the Data access governance reports. These reports provide visibility into sharing links and site permissions across your organization.

How to Find Externally Shared Sites and Teams

You can use the following methods within the SharePoint admin center and related portals:

1. Data Access Governance Reports:

Navigate to Reports > Data access governance in the SharePoint admin center.

Select Sharing links to view reports on "Anyone" links or "Specific people" links shared externally.

These reports help identify sites with high volumes of external sharing.

2. Active Sites Membership:

Go to Sites > Active sites.

Select a specific site and check the Membership tab; external users will be labeled as GUEST next to their names.

3. Site-Level Sharing Reports:

For a specific site, go to Settings > Site usage.

Reference:

<https://learn.microsoft.com/en-us/sharepoint/teams-connected-sites>

#### **NEW QUESTION: 5**

You need to create a Microsoft 365 Copilot agent that can create charts and visualizations based on a Microsoft Excel workbook. What should you configure for the agent?

**A.** the image generator capability

**B.** the Scrum Assistant template

**C.** the Customer Insights Assistant template

**D.** the code interpreter capability

**Answer: D (LEAVE A REPLY)**

To enable a Microsoft 365 Copilot agent to create charts and visualizations from an Excel workbook, you must configure both the agent's capabilities and the workbook's structure.

1. Agent Configuration

When building or configuring your agent in the Microsoft 365 Agent Builder, ensure the following is set:

\*-> Enable Code Interpreter: In the "Capabilities" section, toggle on the Code interpreter (often labeled as "Create documents, charts, and code"). This allows the agent to analyze data and generate visual outputs.

\* Model Selection: Agent Mode typically requires access to advanced reasoning models (like OpenAI or Anthropic); ensure these are enabled in your Microsoft 365 Admin Center.

2. Excel Workbook Requirements

The agent can only interact with data that meets specific technical criteria

#### **NEW QUESTION: 6**

A Finance user received a sophisticated phishing email with a malicious link that was neutralized.

The security team needs a single, centralized view to review the incident timeline, related alerts (email and endpoint), and recommended actions to harden posture across email and endpoints.

Which Defender XDR capability or portal area gives the security operations team that unified incident timeline and improvement recommendations?

- A. Microsoft Defender Vulnerability Management
- B. Microsoft Defender for Identity
- C. The unified Incidents and Alerts experience plus Secure Score in the Microsoft Defender portal
- D. Microsoft Defender for Office 365

**Answer:** ([SHOW ANSWER](#))

#### NEW QUESTION: 7

Your organization has a Microsoft 365 subscription.

You create a security group named Group1 and assign a Microsoft 365 E3 license to the group.

You discover that a user named User1 does NOT have access to the Microsoft 365 E3 features.

You need to ensure that User1 can access all the Microsoft 365 E3 features.

Which two actions can you perform? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Add User1 to Group1.
- B. Assign a Conditional Access policy to Group1.
- C. Assign a Conditional Access policy to User1.
- D. Assign a license to User1.

**Answer:** ([SHOW ANSWER](#))

You can license a user with Microsoft 365 E3 either by adding them to a licensed security group or by direct assignment in the Microsoft 365 admin center. Group-based licensing automatically assigns licenses to members, which is ideal for automation, while direct assignment is better for individual, immediate, or one-off licensing needs.

<https://learn.microsoft.com/en-us/microsoft-365/enterprise/assign-licenses-to-user-accounts>

#### NEW QUESTION: 8

An AI agent being prepared to summarize customer transcripts shows bias favoring certain geographic regions. Which Microsoft Responsible AI principle is primarily violated and should be addressed before deployment?

- A. Fairness
- B. Transparency
- C. Accountability
- D. Inclusiveness

**Answer:** ([SHOW ANSWER](#))

The principle of Fairness dictates that AI systems should treat all people fairly and not cause harm by reinforcing societal biases.

Producing summaries that disproportionately favor certain geographic regions (or any demographic group) is a clear example of an unfair or biased outcome. The AI agent must be refined to ensure it operates in a just and unbiased manner for all customer segments.

**NEW QUESTION: 14**

A critical governance risk when implementing Microsoft 365 Copilot is the potential for oversharing of corporate data. The Chief Compliance Officer is concerned that, because Copilot uses all data a user can access, a user may inadvertently get access to sensitive information they should not have. What is the most common cause of this oversharing risk that administrators must address as a high-priority governance task before deploying Copilot widely?

- A. Overly broad permissions granted to sites or files
- B. Copilot chat history is not subject to eDiscovery or retention
- C. Copilot bypasses SharePoint access controls when content is indexed
- D. Azure OpenAI model training uses tenant data and retains it in the tenant

Answer: (SHOW ANSWER)

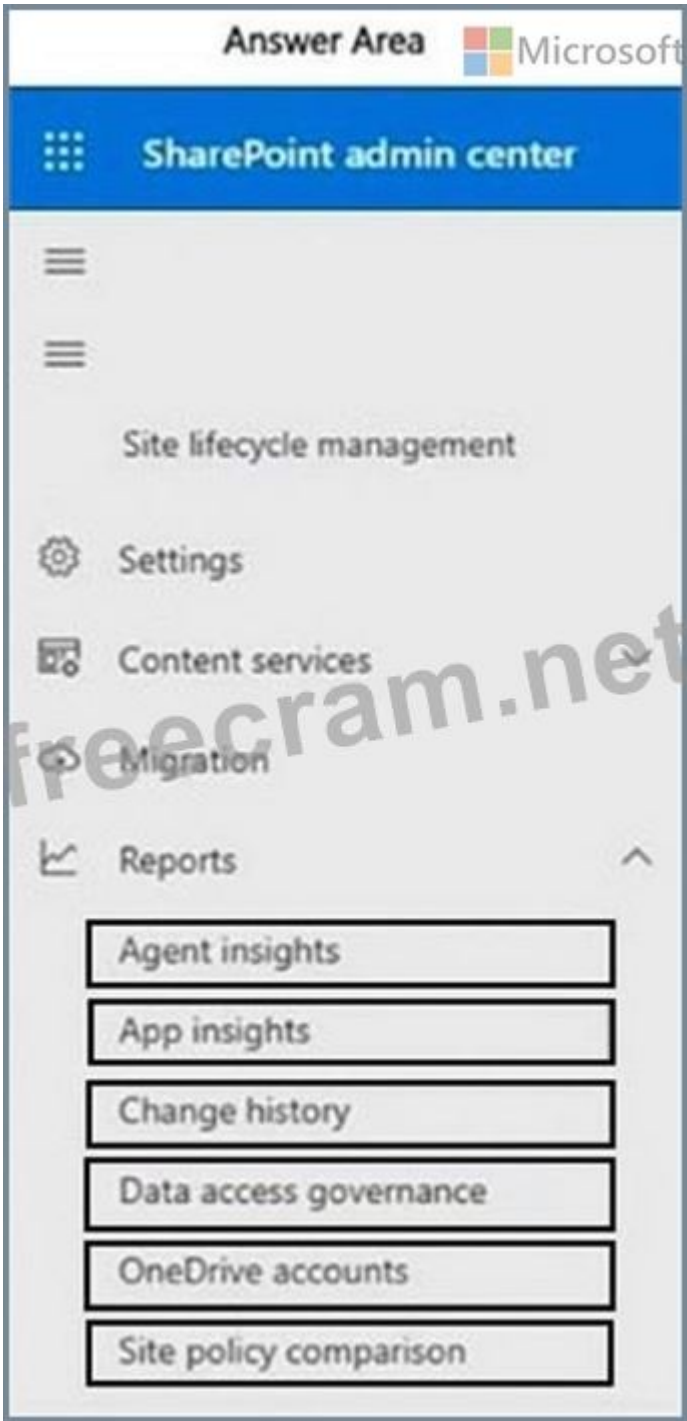

**NEW QUESTION: 15**

Hotspot Question

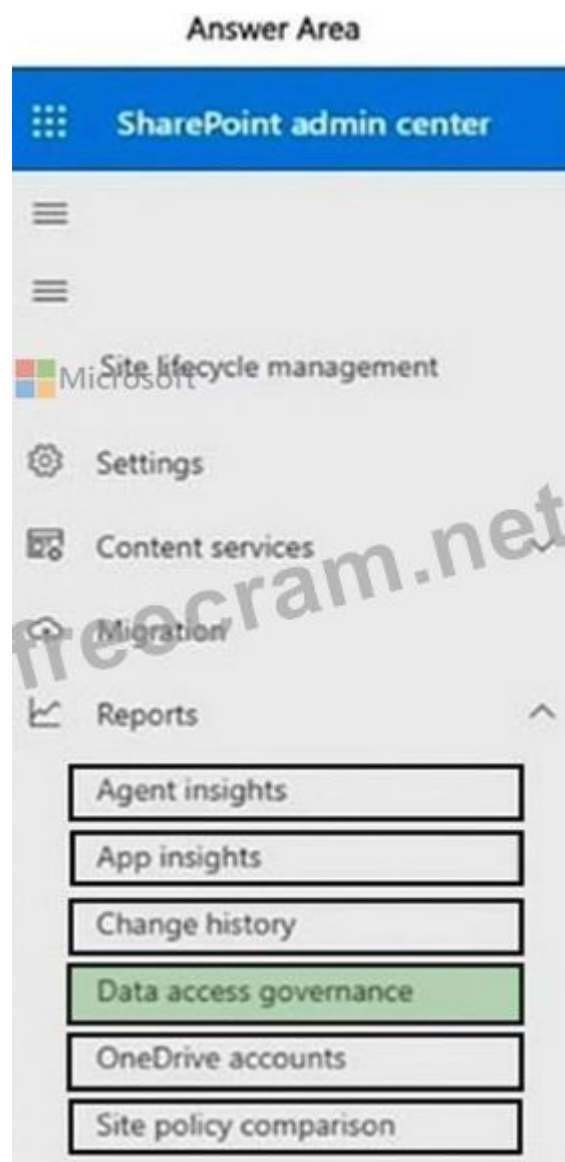

Your organization has a Microsoft 365 subscription.

You discover that Microsoft SharePoint files are being shared to users outside your organization.

You need to identify which files are being shared to the external users.  
Which report should you use in the SharePoint admin center? To answer, select the appropriate report in the answer area.

Answer:

**NEW QUESTION: 16**

You use Microsoft 365 Copilot. What does Copilot use to generate responses based on corporate data stored in Microsoft SharePoint?

- A. Microsoft Intune
- B. Microsoft Defender
- C. Microsoft Graph
- D. Microsoft Purview

**Answer: C (LEAVE A REPLY)**

Microsoft 365 Copilot utilizes the Microsoft Graph API to access and process organizational data in real-time, grounding its AI-generated responses in corporate content stored in SharePoint, OneDrive, and other Microsoft 365 services.

NEW QUESTION: 20

### Hotspot Question

Select the answer that correctly completes the sentence.

Answer Area

If a user shares a Microsoft 365 Copilot agent, you can use

to block users from using the agent.

Microsoft

Microsoft Foundry  
Microsoft Copilot Studio  
the Microsoft 365 admin center  
the Power Apps portal

Answer:

Answer Area

If a user shares a Microsoft 365 Copilot agent, you can use

to block users from using the agent.

Microsoft

Microsoft Foundry  
Microsoft Copilot Studio  
the Microsoft 365 admin center  
the Power Apps portal

### NEW QUESTION: 21

A Marketing user requests Copilot to "Summarize the latest budget proposal" stored on a SharePoint site restricted to Finance. The Marketing user is not a site member. Which principle governs Copilot's behavior and prevents it from returning the restricted content?

- A. Copilot applies Zero Trust verification before processing the request
- B. Copilot only uses content explicitly tagged with a sensitivity label (Grounding)
- C. Copilot strictly enforces the user's existing Microsoft 365 permissions and will not return content the user cannot access
- D. Microsoft Purview DLP automatically redacts financial figures from Copilot responses

Answer: ([SHOW ANSWER](#))

This is the fundamental security principle of Microsoft 365 Copilot, often summarized as Copilot operates within your existing security, compliance, and privacy policies. If the user does not have permission to access a document (the budget proposal) via standard Microsoft 365 access controls (SharePoint permissions), Copilot will not be able to retrieve or include that content in its response. This is a primary security boundary.

### NEW QUESTION: 22

Hotspot Question

Select the answer that correctly completes the sentence.

Answer Area

Microsoft

From the Microsoft Teams admin center, you can

assign a Teams license to a user.

deploy the Teams client.

manage a Teams Rooms device.

prevent users from creating teams.

Answer:

Answer Area

Microsoft

From the Microsoft Teams admin center, you can

assign a Teams license to a user.

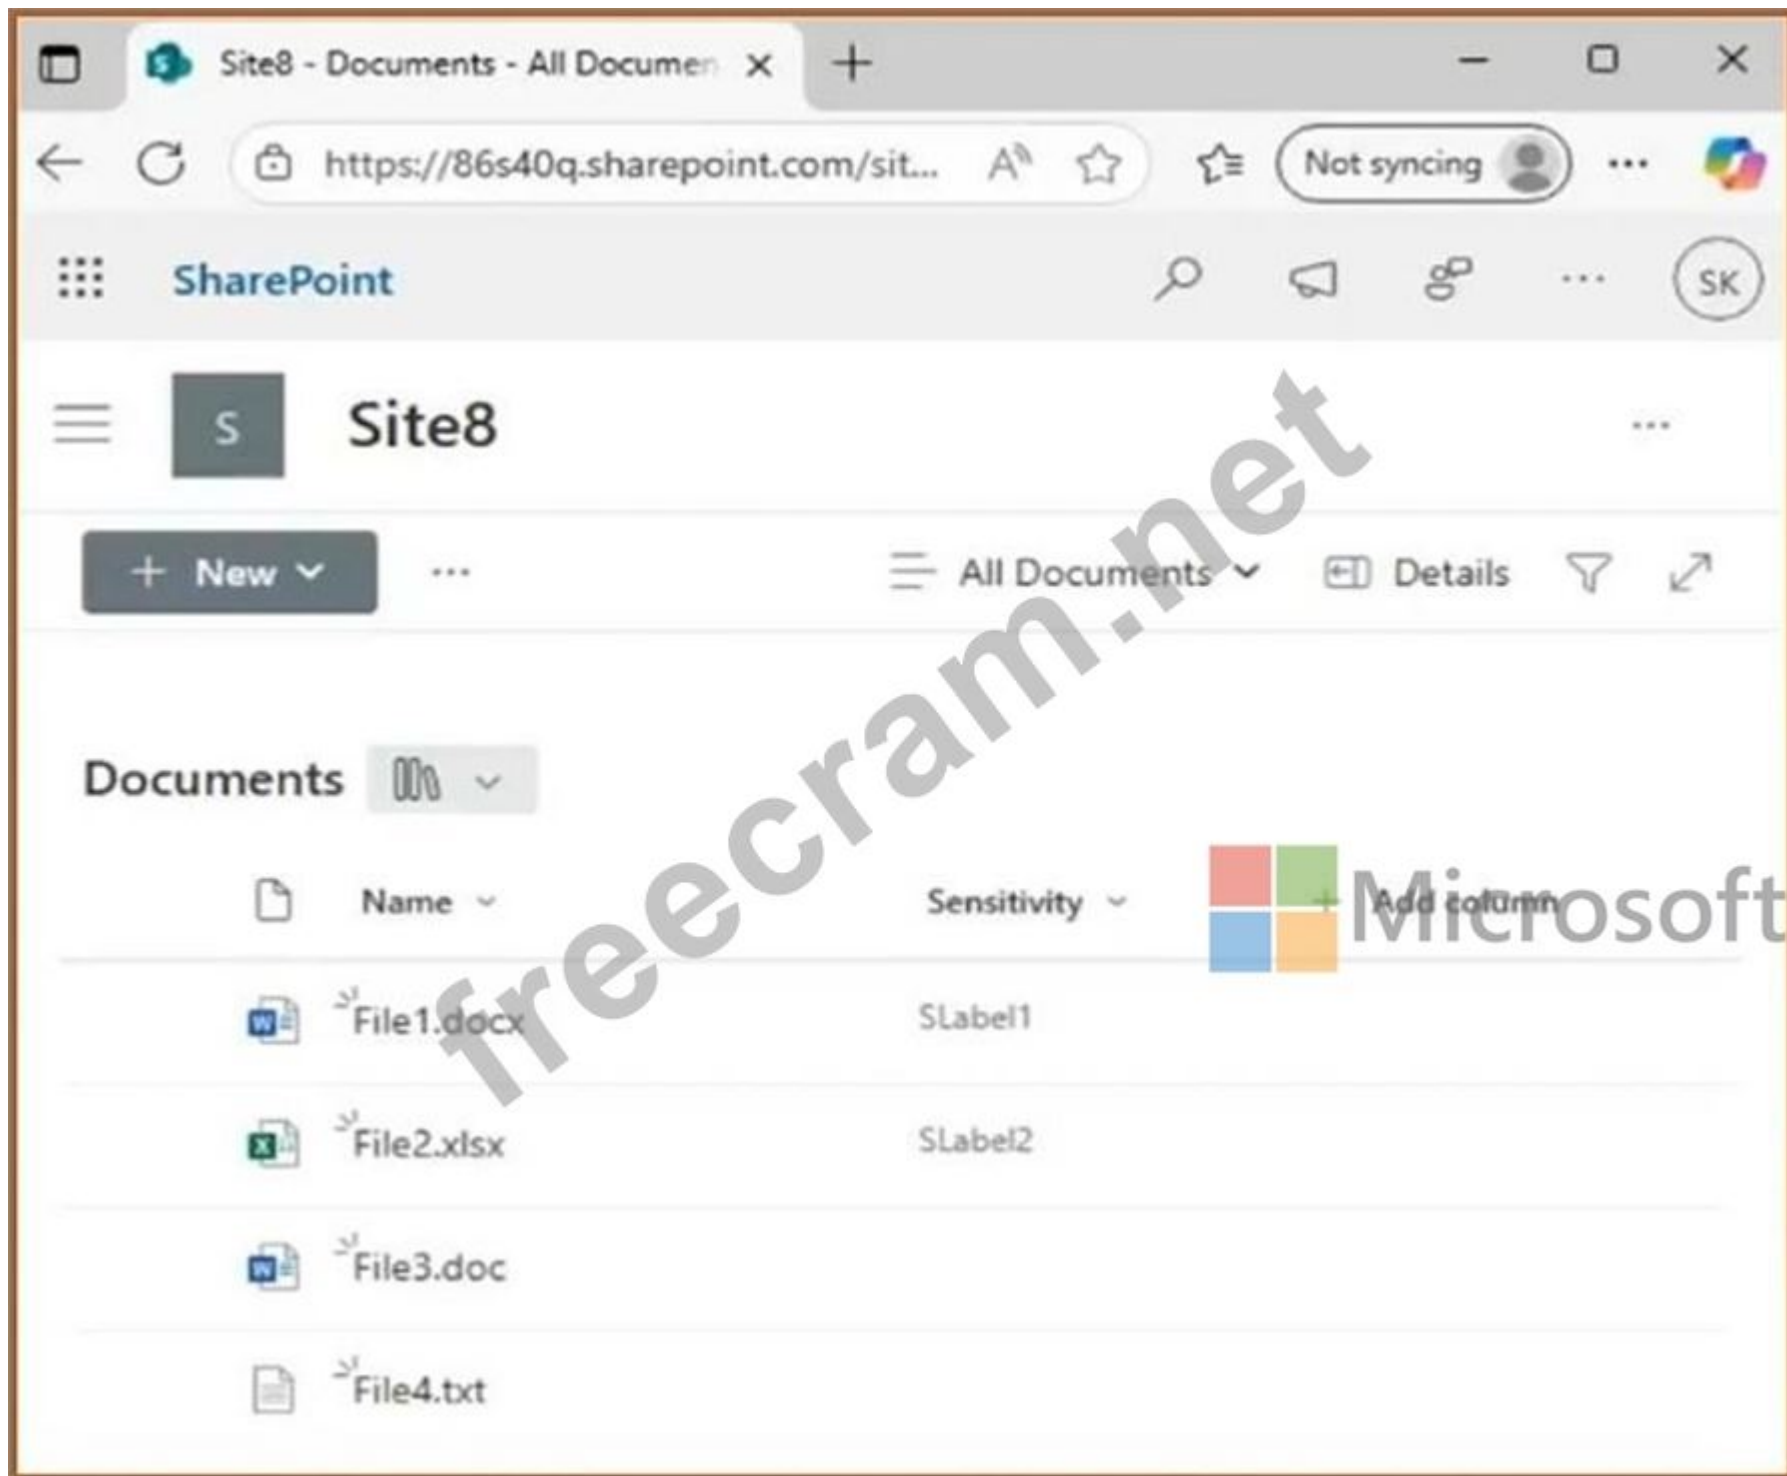

deploy the Teams client.

manage a Teams Rooms device.

prevent users from creating teams.

NEW QUESTION: 23

You have a Microsoft SharePoint site as shown in the following exhibit.

You need to view the settings of SLabel1.

What should you use?

- A. the Microsoft Defender portal
- B. the SharePoint admin center
- C. the Microsoft 365 admin center
- D. the Microsoft Purview portal

**Answer:** ([SHOW ANSWER](#))

To examine or modify the settings of a specific sensitivity label, you must use the Microsoft Purview portal.

While you can see which labels are applied to sites or files within the SharePoint admin center or document libraries, the actual configuration, definition, and security settings for the sensitivity label itself are managed exclusively in the Microsoft Purview portal.

Where to go:

Navigate to: Microsoft Purview portal

Go to: Solutions > Information Protection

Select: Labels (or "Sensitivity labels")

<https://learn.microsoft.com/en-us/purview/sensitivity-labels-teams-groups-sites>

#### **NEW QUESTION: 24**

Your company is piloting the use of Microsoft 365 Copilot and has purchased 100 Microsoft 365 Copilot licenses.

You need to view detailed reports about Copilot usage in Microsoft Teams, such as meeting hours summarized by Copilot and meeting actions taken by using Copilot.

What should you use?

**A.** the Microsoft 365 Copilot readiness report in the Microsoft 365 admin center

**B.** the Microsoft 365 Copilot usage report in the Microsoft 365 admin center

**C.** the Microsoft 365 Copilot dashboard in Microsoft Viva Insights

**D.** the Microsoft 365 Apps usage report in the Microsoft 365 admin center

**Answer: (SHOW ANSWER)**

Organizations with hundreds of Microsoft 365 Copilot licenses can use the Microsoft Copilot Dashboard in Microsoft Viva Insights to track adoption and impact. This dashboard provides detailed, aggregated metrics on Copilot usage in Microsoft Teams, including total active users, meeting hours summarized, and actions taken (such as prompts) across meetings, chat, and email.
