NEW QUESTION: 18

Which two options are supported for the IaaS database in a minimal deployment of vRealize Automation?

(Choose two.)

A. Microsoft SQL Server installed on the IaaS server

B. Microsoft SQL Server installed on an external server

C. PostgreSQL Server installed on an external server

D. PostgreSQL Server installed on an IaaS server

Answer: ([SHOW ANSWER](#))

Explanation/Reference:

Explanation:

Minimal vRealize Automation Deployments

Minimal deployments include one vRealize Automation appliance and one Windows server that hosts the IaaS components. In a minimal deployment, the vRealize Automation SQL Server database can be on the same IaaS Windows server with the IaaS components, or on a separate Windows server.

How does a reservation with a priority of 1 impact the environment?

A. The business group assigned this reservation will have preferred access to the compute resources over other business groups with a priority greater than 1.

B. If a business group has multiple reservations, other reservations will be chosen over this reservation for business groups with a priority greater than 1.

C. The business group assigned this reservation will have less than preferred access to the compute resources compared to other business groups with a priority greater than 1.

D. If a business group has multiple reservations, this reservation will be chosen over all other reservations for business groups with a priority greater than 1.

Answer: ([SHOW ANSWER](#))

Explanation/Reference:

Explanation:

The priority field is used if you are going to create multiple reservations for the same reservation policy. For example, if we had two, the second one we create would have a priority of 2. When a user tries to provision a virtual machine from the catalog it will use the lowest priority unless it is not available any longer then move to alternate resources Reference:
