NEW QUESTION: 1

A customer has these requirements for storage:

Protocol used must have a file based access.

Protocol used must have built in native multipathing.

Protocol used must support authentication.

To meet these requirements, which protocol should be used for storage?

A. NFS v4.1

B. NFS v3

C. iSCSI

D. FCoE

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 2

A company is designing a new vSphere cluster to support a mission-critical application.

The application requires 100% availability and cannot be restarted to recover from an ESXi host failure.

The application consists of a group of 16 virtual machines, each with 8 vCPU configured.

Which solution satisfies the availability requirements?

A. vSphere Site Recovery Manager

B. Guest OS-based software clustering

C. vSphere High Availability

D. vSphere Fault Tolerance

E. vSphere High Availability Application Monitoring

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 3

After the vSAN iSCSI Target service is enabled, which statement about iSCSI networks is true?

- A. The vSAN iSCSI Target service always uses all Management VMkernel interfaces.
- B. The vSAN iSCSI Target service always uses the vMotion network.
- C. A single VMkernel interface must be selected for all iSCSI targets.
- D. A separate VMkernel interface may be configured per target.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 4

DRAG DROP

Match the business statement to its appropriate concept.

Select and Place:

Business statement	Concept
The operations must be automated and scable	Security
The transactions must be services in under 2ms.	Performance
The maximum recovery time objective is two hours.	Availability
The integrity of transactions cannot be compromised.	Manageability
The services cannot be interrupted for more than 5 minutes per year.	Recoverability

Answer:

Business statement	Concept
	The integrity of transactions cannot be compromised.
	The transactions must be services in under 2ms.
	The services cannot be interrupted for more than 5 minutes per year.
	The operations must be automated and scable
	The maximum recovery time objective is two hours.

NEW QUESTION: 5

The customer has two sites that must operate independently of each other in the event of a WAN failure.

During normal operations, administrators from each site must be able to manage the other site through the vSphere Web Client.

Which vCenter Server Appliance (VCSA) and Platform Services Controller (PSC) diagram shows the VMware-recommended design that satisfies these requirements?

A:

B:

C:

D:

A. Option D

B. Option B

C. Option A

D. Option C

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 6

DRAG DROP

A leading steel manufacturer relies on SAP for purchase, sales, and invoice processing.

It is planning to virtualize its servers to reduce CAPEX and OPEX.

However, its CIO is concerned about the availability, performance, manageability, recoverability, and

security for the SAP database and ERP instance.

Match the business requirement with the appropriate design concept.

Select and Place:

Business Requirement	Design Concept
The application must scale within two hours.	Performance
The application must support clustering between physical and virtual machines.	Recoverability
The application must be restored in 30 minutes in case of disaster.	Security
The application data must be encrypted at rest.	Manageability
The application must generate 200 invoices concurrently.	Availability

Answer:

Business Requirement	Design Concept
	The application must generate 200 invoices concurrently.
	The application must be restored in 30 minutes in case of disaster.
	The application data must be encrypted at rest.
	The application must support clustering between physical and virtual machines.
	The application must scale within two hours.

NEW QUESTION: 7

A customer has requested a vSphere 6.5 deployment design where ESXi hosts are provisioned with Auto Deploy. The customer requires that certificates can be automatically refreshed and renewed from the vSphere Web Client for ESXi hosts.

Which certificate policy should be configured for vCenter Server?

- A. Custom Certificate Authority
- B. VMware Certificate Authority
- C. Thumbprint Mode
- D. Subordinate Certificate Authority

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 8

A developer is tasked with building an application to process shipping requests. The developer is consulting the vSphere team to determine failover options and performance best practices.

The development team is providing three physical ESXi hosts with 8 CPU cores and 256GB of RAM

▪
per host.

The developer does NOT know how many virtual machines they will require.

▪
Which virtual machine (VM) sizing strategy will provide the highest level of uptime, individual VM performance, and failover capacity?

- A. Many small 1 vCPU VMs participating in an OS level clustered application protected by vSphere Fault Tolerance.

- B. A few large 8 vCPU VMs per host protected by vSphere Fault Tolerance.
- C. Many small 1 vCPU VMs participating in an OS level clustered application protected by vSphere HA.
- D. A few large 8 vCPU VMs per host protected by vSphere HA.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 9

A company has requested assistance with a new cross-site failover design to support business-critical applications.

It has two sites which are very well-connected, and latency is less than 5ms round trip.

The customer requires that its applications be restarted even in the event of a total site failure.

The applications must be kept online even when migrated during maintenance.

Storage arrays at either site support both synchronous and asynchronous replication.

Which two options are accurate application requirements for this scenario? (Choose two.)

- A. The design must ensure continuous application uptime even during a total site failure.
- B. The design must prioritize application availability.
- C. The applications are latency-sensitive.
- D. The design must ensure application recoverability at the second site.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 10

A company has requested a new vSphere 6.5 design that will allow it to finally break the 80 virtualization barrier by virtualizing its resource-intensive application.

The application is highly available by design and includes application-aware clustering software capable of operating as a fully distributed system.

The company's Application Version 2.0 consists of 386 small applications and middleware with non-

persistent storage and 24 database virtual machines at each data center.

When coupled with a proper load balancing solution, this application can continue operating even with

the loss of an entire data center, but the small applications and middleware tiers within a data center must exist within the same broadcast domain.

The database tier is tightly controlled with a firewall policy that only allows middleware tier access, and

is replicated to other sites using a dedicated circuit.

Which two application requirements apply to this scenario? (Choose two.)

- A. The application will require one large subnet.
- B. The application will require a method of balancing and recovering sessions between sites.
- C. Shared storage is required by the application clustering software.

D. The application will require the configuration of an IGMP stub and helper.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 11

A customer has storage arrays from two different storage vendors at two different sites. The customer wants to restore operations at the secondary site in the event of a disaster.

Which VMware technology must be used to meet this requirement?

- A. array-based replication
- B. vSphere Data Protection
- C. vSphere Fault Tolerance
- D. vSphere replication

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 12

A customer is deploying a mission-critical Oracle database with high SLA requirements, including high performance and high availability. The customer has chosen to purchase an All-Flash vSAN solution.

Which three storage policies should be used? (Choose three.)

- A. RAID5/6 for data disk and RAID1 for OS disk with FTT=2
- B. RAID5/6 for OS disk and RAID1 for data disk with FTT=2
- C. Configure multiple disk stripes.
- D. Deduplication and Compression should be disabled.
- E. IOPS limit and checksum should be enabled.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 13

A virtualization administrator has been tasked with migrating several business applications from physical to virtual. The administrator must also migrate the virtual machines from VMware Workstation to vSphere 6.5, using vCenter Converter Standalone 6.1.

In this scenario, which two source types are supported? (Choose two.)

- A. powered-on Windows Server 2000 Workstation virtual machine
- B. powered-off Windows Server 2008 physical machine
- C. powered-off Windows Server 2008 Workstation virtual machine
- D. powered-on Windows Server 2008 physical machine

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 14

A company would like to leverage snapshot technology on vSphere 6.5.

Which configuration supports taking snapshots?

- A. SQL Always on Availability Group
- B. vSphere Fault Tolerance VM.

C. Windows Failover Cluster VM with RDM in virtual mode.

D. Windows Failover Cluster VM with RDM in physical mode

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 15

A solution architect has been tasked with designing a new environment for a company's growing needs, and has obtained this information:

Uptime is critical during regular business hours when 95% of the transactions occur. Application uptime

▪ must be 99.9% during those hours.

▪ In a true disaster, the business can withstand a day of data loss and half a day of downtime.

▪ The company is one year into a 5-year contract with the co-lo data center.

▪ The building that is currently occupied no longer has any floor space available, but the company has 3

▪ empty racks of space. The co-lo can provide up to 11KVA of power per rack.

▪ There are current contracts with Dell to provide servers and with Cisco to provide the network components

▪ The network team has standardized on an end-to-end 10Gb network.

Based on this information, what are two requirements for the new design? (Choose two.)

A. RTO of 12 hours.

B. The application must be available 99.9% during business hours.

C. RTO of 24 hours.

D. 11 KVA of power is available per rack.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 16

A company provides critical financial and statistical data for several major banks:

The company ensures that the bank's customer data is secure and that analytics data is available when

▪ needed.

▪ Customers rely on this data before making crucial business and financial decisions.

▪ Just a few minutes of downtime can result in loss of revenue and trust.

▪ To meet high-availability requirements, the company's IT infrastructure components must be redundant.

▪ The company established three data centers across the globe and interconnected them with high-

▪ speed WAN links.

Due to the rapid growth of its customers and their increasing demands, the compute, network, and

storage were procured and managed by the company's enterprise system administrators group.

What are its two key challenges? (Choose two.)

- A. Availability of business applications must be ensured.
- B. Regulatory requirements must be met.
- C. Data centers across the globe possess manageability problems.
- D. Hardware-defined data centers have limitations.

Answer: A,B ([LEAVE A REPLY](#))

NEW QUESTION: 17

A company's CTO is very concerned about web server outages that are caused by server hardware failures.

Which feature can protect the web server virtual machine from this kind of outage?

- A. vCenter High Availability
- B. Proactive High Availability
- C. High Availability Orchestrated Restart
- D. High Availability Admission Control

Answer: (SHOW ANSWER)

Explanation/Reference:

Reference <https://docs.vmware.com/en/VMware-vSphere/6.5/vsphere-esxi-vcenter-server-65-availability-guide.pdf>

NEW QUESTION: 18

A company has developers located in Eastern Europe (EE) and a QA Department in Bermuda. The company is planning to create an environment based on a blueprint of 4-8 virtual machines for

each of the developers and one for every QA project.

The proposed configuration will allow each developer to work independently and be able to collapse

and re-create the environment as needed.

QA Teams will be able to recreate the environment that is required for a specific application.

Individual virtual machines in the blueprint are being continually updated with newly available software

packages.

The company is planning to use the vSphere Content Library to store images and synchronize them

between sites.

Which four supported configurations can the company implement? (Choose four.)

- A. FTP protocol to transfer data between published in EE and subscribed in Bermuda libraries.
- B. Published library in EE backed by an NFS file system while subscribed library in Bermuda is backed up by datastore.
- C. EE and Bermuda libraries that are backed by an NFS file system.
- D. EE and Bermuda vCenter Servers with Enhanced Linked Mode.
- E. A minimum 10 GbE connection between EE published and Bermuda subscribed libraries is required.
- F. EE and Bermuda vCenter Servers without Enhanced Linked Mode.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 19

A customer is virtualizing a mission-critical Microsoft SQL database and needs a configuration that provides optimal NUMA performance.

There are two possible clusters that the database virtual machine could reside in Cluster A is vSphere

6.0 and Cluster B is vSphere 6.5.

All ESXi hosts contain dual Intel Xeon E5-2650 processors (ie:2 socket, 10 cores per socket) and 256Gb RAM with vNUMA in its default configuration.

Given this scenario, which three statements are true? (Choose three.)

- A. Placing a 10 vCPU VM in Cluster B and configuring it with 2 Sockets and 5 Cores Per Socket will result in 2 vNUMA nodes.
- B. Enabling CPU Hot Add on a virtual machine will disable vNUMA.
- C. Placing a 10 vCPU VM in Cluster A and configuring it with 2 Sockets and 5 Cores Per Socket will result in 2 vNUMA nodes.
- D. Placing the VM in Cluster B and configuring it with 5 Sockets and 2 Cores Per Socket will result in 1 vNUMA node.
- E. Enabling Memory Hot Add on a virtual machine will disable vNUMA.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 20

The ability to live-migrate all virtual machines between two clusters is a requirement in the customer's design. Which two clusters and EVC configurations will accomplish this? (Choose two.) A:

Cluster 1

- ESXi 6.0
- Intel Skylake CPUs
- EVC Enabled: AMD Opteron™ “Steamroller” Generation

Cluster 2

- ESXi 6.5
- AMD Steamroller CPUs
- EVC Enabled: AMD Opteron™ “Steamroller” Generation

B:

Cluster 1

- ESXi 6.5
- Intel® Broadwell CPUs
- EVC Disabled

Cluster 2

- ESXi 6.0
- Intel® Broadwell CPUs
- EVC Disabled

C:

Cluster 1

- ESXi 5.5
- AMD Piledriver CPUs
- EVC Enabled: AMD Opteron™ “Piledriver” Generation

Cluster 2

- ESXi 6.5
- AMD Steamroller CPUs
- EVC Enabled: AMD Opteron™ “Piledriver” Generation

D:

Cluster 1

- ESXi 6.5
- Intel Broadwell CPUs
- EVC Enabled: Intel® “Broadwell” Generation

Cluster 2

- ESXi 6.5
- Intel Sandy Bridge CPUs
- EVC Enabled: Intel® “Sandy Bridge” Generation

- A. Option B
- B. Option D
- C. Option C

D. Option A

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 21

A customer wants to make its data available with a RPO of 10 minutes. Replication to the second data center will be done using the network. Which type of storage configuration should be used?

- A. VMFS datastore on ESXi 6.0 with vSphere replication appliance 6.5
- B. VMFS datastore on ESXi 6.0 with vSphere replication appliance 6.0
- C. vSAN datastore on ESXi 6.0 with vSphere replication appliance 6.5
- D. NFS datastore on ESXi 6.0 with vSphere replication appliance 6.0

Answer: B ([LEAVE A REPLY](#))

NEW QUESTION: 22

A company is conducting a technology refresh and has requested assistance with a vSphere 6.5 design.

The company has a corporate headquarters and two data centers strategically placed around the country, which provide the bulk of the computer power and storage for their customer-facing stores.

The company requires each of its stores to be able to operate independently if connectivity is ever lost.

Presently, all stores are configured differently and must be standardized as part of the technology refresh.

To support store operations, only a dozen applications are required.

Any downtime during store hours could result in significant losses.

Any proposed design must minimize cost.

What is a VMware-recommended option for this scenario?

- A. VMware vSAN Stretched Cluster with nearest regional data center
- B. VMware vSphere cluster with low-cost iSCSI shared storage
- C. VMware vSAN cluster with a minimum of three hosts
- D. VMware vSAN Remote Office Branch Office (ROBO) with two hosts

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 23

DRAG DROP

Categorize the tools as providing either Availability or Recoverability.

Select and Place:

Tools	Availability
vSphere Storage APIs for Data Protection	Place here
Proactive HA	Place here
vCenter HA	
vSphere HA	Recoverability
vSphere Replication	Place here
VMware Fault Tolerance	Place here
	Place here
	Place here

Answer:

NEW QUESTION: 24

A customer is using blade servers with only one HBA.

Which two design concepts apply to this scenario? (Choose two.)

- A. Requirement
- B. Assumption
- C. Constraint
- D. Risk

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 25

DRAG DROP

A company has one data center site running 50 hosts and 400 virtual machines and requires a vSphere 6.x design.

1. The CIO wants to add a secondary site for Disaster Recovery (DR) with 4 hours RPO.
2. The application developer is concerned about anticipated growth as several new project begin.
3. The CISO is worried about data leaks and theft.
4. The CTO would like to buy new servers with better specifications and higher consolidation ratio.

Determine the critical requirements for each of the key stakeholders. Some requirements might have more than one stakeholder.

Select and Place:

Business Requirement	Client CIO
Performance	Place here.
Cost	Place here.
Business Continuity	Place here.
Disaster Recovery	Client CTO
Data Integrity	Place here.
	Place here.
	Client Developer
	Place here.

vmware®

Answer:

NEW QUESTION: 26

Which two types of workloads are efficiently consolidated when virtualize? (Choose two.)

- A. Workloads that are NOT CPU bound; most of their time is spent waiting for external events such as user interaction.
- B. Workloads that do NOT require user input and are constantly processing large amounts of batched data.
- C. Workloads that will consume all available assigned resources.
- D. Workloads that do NOT require access to specific physical resources such as a hardware dongle or graphics card.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 27

DRAG DROP

A company is a leading for an online travel booking system with over a \$1,000,000 turnover each day. The company wants to leverage VMware cloud solutions to consolidate, scale, and ensure high availability for all of its data centers.

Match each business requirement to its appropriate design concept.

Select and Place:

Business Requirement
Architecture must support data center-level resiliency.
Design should require less than 5 minutes to restore after failure.
WAN link between the data centers must be private. ®
Data centers should be administered by a centralized console.
Infrastructure must be properly provisioned to ensure application response time.

Design Concept
Performance
Recoverability
Security
Manageability
Availability

Answer:

Business Requirement	Design Concept
	Infrastructure must be properly provisioned to ensure application response time.
	Architecture must support data center-level resiliency.
	WAN link between the data centers must be private.
	Data centers should be administered by a centralized console.
	Design should require less than 5 minutes to restore after failure.

NEW QUESTION: 28

A solution architect has been tasked with designing a new environment that meets the needs of a growing company, and has obtained this information.

The current capacity will be exhausted in 180 days, and the new infrastructure must be deployed and in

▪ production prior to that.

The new servers have a 90-day delivery time.

▪

A data center for disaster recovery has been selected, and it is 20 miles away and connected by MPLS.

The security team will continue to utilize its current investments and VM Encryption for the new environment.

The backup team currently uses Data Domain, and reports show an 8:1 compression and deduplication

ratio for backups.

Based on the information obtained, which two statements are risks for the new design? (Choose two.)

- A. The Change Advisory Board will approve all changes.
- B. The current firewalls will support the additional workloads.
- C. Current back up space will not be sufficient if using VM Encryption.
- D. MPLS will be used to connect the two data centers.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 29

An architect is designing a vSphere 6.5 implementation.

The customer requires Cross vCenter vMotion for the newly-created data centers in New York and

Houston

Each data center will use different IP networks for management and vMotion

When creating a vMotion network, which two statements are required in order to use Cross vCenter Server vMotion? (Choose two.)

- A. vMotion Networks in both data centers must be in the same L2 stretched VLAN.
- B. The virtual machine port groups must use the same name.
- C. vMotion networks in both data centers must be routable over L3 network.
- D. VMkernel port for vMotion must be configured with vMotion TCP/IP stack with correct gateway.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 30

A company is consolidating its IT operations efforts by moving the Finance, IT, and QA departments towards a self-service environment, following SDDC best practices.

All departments have different priorities and expectations for uptime of the required infrastructure and

applications

Project stakeholders are still discussing final approvals for the budget with the CFO.

To drive down the operating cost of the environment, only blade servers will implement this project.

To ensure business continuity, a colocation provider was chosen to fail over virtual machines.

▪ The implementation of the project will follow a public reference architecture provided by VMware.

What is the assumption in this scenario?

- A. The chosen architecture is sufficient.
- B. All departments demand different SLAs.
- C. Final budget approvals are being discussed.
- D. The environment will be shared by several departments.

Answer: ([SHOW ANSWER](#))

Explanation/Reference:

NEW QUESTION: 31

View the exhibit.

Referring to the exhibit, which appliance or device belongs in the square with the question mark?

- A. vCenter Server Appliance
- B. Load Balancer
- C. Platform Services Controller
- D. Firewall Appliance

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 32

A customer is using a vSphere APIs for Storage Awareness (VASA) compatible storage array. The VASA provider is published as a virtual appliance.

To ensure recoverability, where must the VASA provider and vCenter server virtual machines be stored?

- A. the VASA provider and vCenter Server will be placed in the standard datastore (VMFS, NFS).
- B. the VASA provider will be placed on the vVol datastore and the vCenter Server will be placed on the standard datastore (VMFS, NFS)
- C. the VASA provider and vCenter Server will be placed on the vVol datastore.
- D. the vCenter Server will be placed on the vVol datastore and the VASA provider will be placed on the standard datastore (VMFS, NFS)

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 33

A company is implementing a new cluster to support its end user desktop workloads.

The workload is required to support 200 virtual machines.

Each end-user desktop is configured with two vCPUs, 8GB of RAM, and 40GB of thick-provisioned disk

space.

The architect has expressed concerns that virtual machine swap files will fill the 8.5TB datastore available to the cluster.

Which two strategies would address the architect's concern? (Choose two.)

- A. Configure an additional datastore for vswap file storage.
- B. Configure each virtual machine with a 4GB memory reservation.
- C. Configure each virtual machine with a 8GB memory reservation.
- D. Configure an additional datastore for snapshot storage.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 34

The hardware operations team is planning to purchase new ESXi hosts for the upcoming budget year and is requesting recommendations on the type of servers to purchase for a web application. The web application consists of hundreds of small virtual machines (1 vCPU and 8GB of RAM) that are members of a software cluster.

The solution should have these abilities:

Recover from ESXi host hardware failures

Zero downtime for a limited number of critical virtual machines (VMs)

Migrate running VMs between ESXi hosts without interruption to the operating system

Perform these functions using VMware ESXi servers, vCenter Server, and high-speed network interfaces

What are the three functional requirements and their associated VMware technologies? (Choose three.)

- A. fault tolerance for limited number of critical VMs (vSphere FT)
- B. high speed network interface (vSphere Distributed Switches)
- C. ability to migrate running VMs (vSphere vMotion)
- D. VMware ESXi Servers (vSphere Auto Deploy)
- E. automatic restarts of failed VMs (vSphere HA)

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 35

A company has requested that a new vSphere 6.5 design be created.

The existing environment consists of 32 vSphere 6.0 hosts attached to an iSCSI storage array.

The storage arrays contain external customer financial and medical records used by company's investment and medical services division.

The design must:

Protect the company's existing data center investment

Expand to a second data center site

Introduce process automation

Expand to and fail over to public cloud

Which two non-functional requirements are applicable for this design? (Choose two.)

- A. The product of the design must feature 3DES encryption at the virtual machine disk level.
- B. Every host in the design must have Lockdown Mode enabled for security.
- C. At least two 10Gbps interfaces must be dedicated to storage on each host.
- D. The product of the design must account for regulatory compliance.
- E. The automation solution must be compatible with the existing equipment.
